peak $16/e^2 = 2.17$ at $n \approx 10^{23.7}$
brute force: 2^n
$n = 50$: first above 1
below 1 again at $n \approx e^{5504} \approx 10^{2390}$
practical range
$50 \le n \le 10^6$
$\rho(n)/n$: verified exponent over n
(bound $= 2^{A\rho(n)} \cdot$ poly, drawn at $A = 1$)
