

(a) $S = \{2\}$: the definite move keeps 0

closing 0 opens 0, 7, 11 and closes 0, 3, 4:
open = close = 3; 3 and 4 need only stack 0

(b) $B = \{2, 3, 4\}$: closing 3 and 4 first

$b(B) = 2$ (open 0, 1) $< 3 = b(X)$ (open 1, 7, 11),
 $X = \{0, 2, 3, 4\}$: the repaired rule does not fire

● closed

● open stack

● customer 0, the move kept

● (a) new stacks of 0; (b) open at X only

○ other customers
